

## Your practitioner uses Delta *to document your sessions.*

Delta is a clinical assistant built for healthcare professionals. During the session, what is said is transcribed, and Delta turns it into structured notes. Your practitioner can stay focused on you rather than on note-taking.

|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p> <b>What is Delta for?</b></p> <p>Delta sets down the clinical points discussed during the session, to help your practitioner keep your file.</p>                                                                                                                      | <p> <b>Who can see your information?</b></p> <p><b>Your practitioner.</b> Your information is never passed on to third parties, and never used to train artificial intelligence models.</p>               |
| <p> <b>What happens during the session</b></p> <p>The transcription is produced as the session goes along. <b>No audio file is kept.</b> Only the transcript and the notes stay in your file, and your practitioner can delete them at any time.</p>                      | <p> <b>Technical security</b></p> <p>Your data is <b>encrypted in transit and at rest</b> (AES-256). Identifiers are pseudonymised, access is controlled and logged.</p>                                  |
| <p> <b>Where is your data?</b></p> <p>Your data is hosted <b>in Europe</b>, with a provider holding the French <b>HDS</b> certification (Health Data Hosting), reserved for health data. The notes are written by an artificial intelligence running in France too.</p> | <p> <b>Your rights</b></p> <p>You can ask your practitioner at any time <b>not to use Delta</b> during your session. You also have a right of access, rectification and erasure (art. 15 to 17 GDPR).</p> |

### *Legal framework*

Your health data is protected by the **General Data Protection Regulation (GDPR)** and by the **professional secrecy** your practitioner is bound by. **Art. 9.2.h GDPR** allows them to process this data in order to keep your file. Delta acts as a processor, on their instructions only. What your practitioner tells you and this document together constitute the information required by art. 13 and 14 GDPR.

-  Hosted in Europe
